

# Battery charger for Nickel Metal Hydride Batteries / Safety precautions

## Safety precautions

- When using the battery charger, read the instruction manual for correct use.

## Caution

- Do not disassemble or modify the battery charger. Doing so may cause smoke emission, heat generation, ignition or an electric shock.
- Do not insert any battery with its positive and negative poles reversed. Charging a battery with reversed polarity will cause an abnormal reaction inside the battery, which may in turn cause the battery to leak, generate heat, explode or catch fire.
- This battery charger has been exclusively designed for the specified batteries. Do not use this battery charger to charge any battery other than the specified batteries. Doing so may charge the battery with an over current or over voltage, disabling charge control. It may also cause the battery to leak, generate heat, explode or catch fire.
